EDUCATION

Georgia Institute of Technology, Ph.D. & M.S. — Expected June 2024
George W. Woodruff School of Mechanical Engineering – Robotics – Prof. Jun Ueda — **GPA:** 3.32/4.0
- Thesis: Image Guided High Precision Robotic Positioning in MRI for Medical Applications
- NSF Graduate Research Fellowship Program (GRFP) Fellow

Florida International University, B.S
FIU Department of Mechanical and Materials Engineering — **GPA:** 3.63/4.0
- Ronald E. McNair Scholar

SKILLS

- **Programming:** MATLAB, Python, C++, ROS
- **Process Optimization:** Six Sigma Certified
- **Languages:** English & Spanish (native), Japanese (advanced)
- **CAD:** SolidWorks, AutoCAD, Fusion 360

PROFESSIONAL EXPERIENCE

Robotic Safety Assessment of Medical Implants in MRI — Atlanta, GA
Georgia Institute of Technology — Oct 2022 – Present
- Established novel method for measuring radiofrequency induced heating of medical implants in Magnetic Resonance Imaging (MRI) environment by navigating an acousto-optic sensor through ASTM standard gel phantom simulating thermoelectric properties of human tissue to comply with FDA, and ISO Standards
- Mechanically characterizing ASTM standard gel phantom for open-loop resistance compensation

MRI Guided Medical Injection Robot — Atlanta, GA
Georgia Institute of Technology — Aug 2019 – Present
- Designed piezoelectrically actuated 4 Degree of Freedom (DOF) needle guidance robot with sub-millimeter positioning accuracy for stem cell injection into the ventral horn of the spinal cord
- Developed novel method of improving MRI resolution by combining multiple images with sub-pixel shifts induced by the MRI compatible surgical robot through super resolution algorithms
- Experimentally demonstrated 33% improvement in accuracy through the use of Position Sensitive Devices

Robotic Pipe Crawler for Power Plant Inspection — Miami, FL
Florida International University Applied Research Center — Sep 2018 – Aug 2019
- Designed peristaltic robotic pipe crawler to inspect 2 inch diameter pipes in coal power plants
- 3D printed components and integrated sensors, microcontrollers, and motors to control functional prototype
- Optimized pulling force to overcome the friction on the tether cable across several 180 degree bends

Physiological State Estimation for Social Robot Interaction — Wako, Japan
Honda Research Institute Japan — Oct 2022 – Jul 2023
- Integrated a non-invasive wrist sensor and classification model into a table-top social robot's functionality for live streaming and estimation of the user's physiological state as feedback for robot interactions
- Collaborated with researchers internationally to propose design changes to address mechanical issues

Path Planning and Trajectory Optimization of FANUC Robots — Detroit, MI
Fiat Chrysler Automobiles — May 2017 – Aug 2017
- Analyzed cycle time data of crankshaft line over several months to identify bottleneck operation
- Redesigned robot automation movement pattern to reduce cycle time and increase crankshaft production

Development of Multi-Agent Swarm Robotics Platform — East Lansing, MI
Michigan State University — May 2018 – July 2018
- Designed and built a Wi-Fi enabled differential drive swarm robot test-bed to study swarm algorithms
- Interfaced ESP8266 Wi-Fi module with Arduino to demonstrate coverage control algorithm by processing data from VICON overhead camera system in MATLAB and wirelessly transmitting path-finding commands
